

GeoWebFace Known Issues

April 3, 2012

- Bookmark Tool not working
- Data Search has 200 well limit -need large note at top of Results page
- Permit Numbers w/4 digits ex>PN 2345
 - Drillers logs and Well Files not connecting in Results page,
 - But are available on GeoWebFace FTP site
- Printing is very limited
- Oil and Gas Shapefiles FTP download not working
- Map Tools>Quick Zoom>Wells>PRU not working
- Oil and Gas Wells>Directional Start Hole on by default
- Oil and Gas Well Labels look poor over aerial photos
- Duplicate PN (pre-permit well, BDW, Mineral Wells) results in inconsistent results between Data Search and Map Tools>Quick Zoom> Wells
- Many layers are older versions and will be updated soon
 - Oil and Gas Fields
 - Structural Lineaments
 - Major Structural Features
 - Cuestas
- It is not clear which layers that are scale dependent or layers with labels that are scale dependent (See GeoWebFace Layers List)
- Map Tools>Quick Zoom>Well> Permit Number> Download to Excel sometimes still has results from previous Download to Excel even after CTRL F5 between them sometimes get message: No Session State Thread was being aborted.
- Map Tools>Identify>GeoWebFace Results> Download to Excel MESSAGE: No Session State Thread was being aborted
- PLSS Map Service> Section not showing up in the Legend
- On using the Identify Tool, if after clicking on a point that is not an oil and gas well bottom hole location and one get the Latitude & Longitude Identify results, if one then clicks on an oil and gas well bottom hole location, the GeoWebFace Results tab does not display the results for that well.
